Upgrade, Save and Stay Ahead!

Future-proof your measurement solutions and extend until 14 October 2025. Upgrade to the Windows 11 ready version of ZEISS CALYPSO by **31 May 2026** and save up to **30%** on ZEISS software!

Plus receive a **FREE 1-year software maintenance extension** when upgrading from **ZEISS CALYPSO version 6.6** or newer.

Still on ZEISS CALYPSO 6.4 or older?
Make the switch and enjoy any of the following benefits with your upgrade:
- Option X – 1 scanning 3D touch
- Option C: 5602080 (or local equivalent) worth of globe and accessories credit valid 1 year from PO date

Register now to upgrade to Windows 11 !

Define what standard is.

ZEISS CALYPSO

Timeline

ZEISS 1980SX served as the "predecessor" of ZEISS CALYPSO, beginning support for computer workstations in 1990. It enabled computer-based coordinate software, supporting automation, significantly enhancing the efficiency of measurement machine operations, and reducing operator errors.

In 1998, ZEISS CALYPSO 1.0 was officially released to its introduction to the measurement industry. It was the first software to support the Windows operating system. It introduced a graphical user interface (GUI) and command-driven menu structure, making it more intuitive and efficient. Operators can now perform measurements using standard Windows mouse and keyboard inputs.

Moreover, ZEISS CALYPSO has always been optimized for Windows environments, leveraging the latest Windows features for better performance, stability, and security. It supports multi-threading operating system, with upgrade speeds bringing pace with the latest hardware updates for the widespread adoption and application of ZEISS CALYPSO.

1998 ~ 2016

1998
CALYPSO 1.0
System: Windows

Started a new era for CMM-based measurement

2001
CALYPSO 2.0
System: Windows

The software was optimized for Windows 2000 operating system

2005
CALYPSO 4.0
System: Windows

With support for Windows XP operating system

2010
CALYPSO 5.0
System: Windows

With support for Windows 7 operating system

2016
CALYPSO Web
System: Windows

With support for Windows 10 operating system

During this period, ZEISS CALYPSO has carried out many version updates and improvements, which have effectively optimized the user's operating experience and efficiency, and also laid a good foundation for a better enhancement experience in the future.

Added new elements, functions, and measurements, and evaluations

Added the functionality to create and edit points, making it easier to trace and re-evaluate

Added report display functionality, making the analysis more intuitive and understandable

Optimized the evaluation and reporting program for a clear overview

As of 2017, with the rapid development and increasing user demands, ZEISS CALYPSO has entered a fast track in design, with continuous iterations and upgrades. It has made significant technological advancements, focusing on production efficiency, thereby ensuring good quality while reducing time and costs to meet the ever-changing demands of customers.

2017 ~ TO DATE

2017
ZEISS CALYPSO
Expands PMI functionality integrates new measurement applications and simplifies workflows
The program expands smartphones measurement to meet ISO 10360-8:2016 and ISO 1101 standards. It includes control and evaluation of new measurement strategies and sensors. Improved user guidance and workflows for PMI measurements, including traceability and simulation functions. Implementation of new sensors via MX further.

2018
ZEISS CALYPSO
Increases productivity Streamlines processes
The user interface is optimized, and new functions are integrated. The new method and optimization of existing functions increase productivity and process reliability. Automatically calculates multi-hit probes and multi-stylus systems for a significant time saving. The PiWeb interface has been improved for faster data exchange. Implementation of new sensors via MX further. Enhanced visualization functions have been added.

2019
ZEISS CALYPSO
Performance Enhancement Over sixty new functions Increase productivity
The program expands smartphones measurement to meet ISO 10360-8:2016 and ISO 1101 standards. It includes control and evaluation of new measurement strategies and sensors. Improved user guidance and workflows for PMI measurements, including traceability and simulation functions. Implementation of new sensors via MX further.

2020
ZEISS CALYPSO
Quality assurance process Performance enhancement of CAD import and CAD fit
Several functions expanded, like import of ACIS files, adjacent measurement ranges, and automatic CAD fit. Enhancements in the measurement program Inspect PMI Compatibility with STEP format. Optimizes measurement strategies for the Vision sensor, such as edge detection, and enhances graphical visualization options.

2021
ZEISS CALYPSO
Optimized workflow Increases productivity
Innovative optics and CMM capabilities enable measurement of reflective surfaces in a wide range of applications. Optimized workflows and new functions for the Vision sensor, such as different edition measurement evaluations, enhanced measurement strategies, and simulations and highlights only the exceeded tolerance values.

2023
ZEISS CALYPSO
Establishing standards in the field of industrial measurement
New GUIDE integration allows for the use and sharing of measurement strategies between various measurement systems. Improved user navigation via CALYPSO GUIDER support for PCB data. Enhanced measurement strategies and evaluations, recognition of multiple circular features, and indexing options include automatic focusing on faceted data.

2024
ZEISS CALYPSO
Provides Improved tasks Optimizes Processes
The latest version of CALYPSO boosts performance across all software components and systems. The new GOBOT library and PMI Compatibility enhance automation and measurement requirements and it boosts scanning with ZEISS Universal Scanning tasks for faster, more efficient results.

ZEISS CALYPSO

By continuously breaking through technological boundaries and optimizing its functionalities, ZEISS CALYPSO has not only provided strong support for the global industrial measurement field but also establishes its leadership position in the industrial measurement software market. Looking ahead, ZEISS CALYPSO will continue to move forward like a software that, through continuous innovation and improvement, defines the standards of industrial measurement.

Let's see what our customers have to say:

> ZEISS CALYPSO's sustained development and progress, like having an expert engineer team constantly tuning the software to perfection. Every update has brought significant improvements in both efficiency and quality of service.

> Runs smooth! Powerful GOHT and GD standards. This makes it very useful for the user.

> The older software versions are still very stable. The latest functions are also further user friendly.

> My company has other competition equipment in terms of cost-effective. CALYPSO is friendlier to new users and beyond.

> ZEISS CALYPSO's software programming and user interface clearly pulling up the standard for the industry. Its performance has become faster. ZEISS also has great support. Overall, the experience is great.

> We have used ZEISS machines for years, you can always trust their competitive's, which is why we have chosen ZEISS. The user interface making it more [illegible] understand.

Future-proof your system with a software upgrade

Upgrade your software to the latest version and secure it. Software Maintenance Agreement (SMA) to ensure your owner can continue to benefit from the latest innovations.
